

Cursul: “Bazele culturii informaționale”

Bazele de date:

Ce este o bază de date?

Bază de date Rus: база данных Eng: data base

- ▶ Totalitatea datelor și a informațiilor cu un anumit conținut, a descrierilor acestora și a relațiilor dintre ele, înregistrate pe un suport electronic și utilizate în scopul informării.

- ▶ este unul dintre instrumentele fundamentale utilizat pentru organizarea informației.
- ▶ reprezintă o colecție de date organizate pentru a facilita căutarea și regăsirea rapidă prin intermediul calculatorului.

Baza de date:

Înregistrările

- ▶ sunt componentele elementare ale unei baze de date și pot conține informații numerice, text sau reprezentări grafice.

O înregistrare cuprinde câmpuri de date sau elemente de date (numele autorului, titlu etc.) descriu principalele attribute ale unei entități.

Bazele de date pot fi:

full-
text

- care conțin textul integral sau fragmente din documente

numerice

- financiare, rezultate ale diverselor studii, proprietăți fizice sau chimice ale substanelor

Programul HINARI

HINARI
ACCESS TO RESEARCH

Programul HINARI (Health InternetWork Access to Research Initiative)

- coordonat de Organizația Mondială a Sănătății – oferă acces gratuit la cea mai largă colecție de resurse editate de cele mai prestigioase edituri: Blackwell, Elsevier Science, The Harcourt Worlwide STM Group, Wolters Kluwer International Health&Science, Springer Verlag și John Wiley etc.

Programul **HINARI** oferă acces gratuit la cea mai largă colecție de resurse :

10 728 titluri de
reviste medicale

28 baze de date
și colecții de
reviste
electronice

42 surse de
referință

16 colecții în
acces deschis

18 798 cărți
electronice

În compartimentul ***Reference Sources*** puteți accesa cele mai relevante resurse axate pe medicina bazată pe dovezi: Cochrane Library, Clinical Evidence, EBM Guidelines, BMJ Best Practice, Essential Evidence Plus, BMJ Case Reports, BMJ Learning, Duodecim EBM Guidelines etc.

Prin HINARI se oferă acces:

28 baze de date
Scopus (Elsevier),
Web of Knowledge
Special Edition -
Medline, Web of
Knowledge Special
Edition - Current
Contents, Popline
etc.)

42 surse de
referință

16 colecții
în acces
deschis

HINARI

- ▶ este un proiect de inițiativă a Organizației Mondiale a Sănătății (OMS), în colaborare cu o serie de edituri academice majore, universități proeminente și organizații internaționale

În ciuda faptului că toți utilizatorii au
posibilitatea de a vizualiza o imagine de
ansamblu de reviste și de a lua unele link-uri la
textul integral, instituții autorizate sunt numai :
clinicile de învățământ, biblioteci universitare ,
instituții de învățământ profesionale , agenții
guvernamentale înregistrate, care pot avea
acces la textele integrale ale unor cărți și acces
gratuit la toate serviciile HINARI .

Vă oferă acces la următoarele baze de date de profil medical și farmaceutic.

 UpToDate

Baza de date UpToDate este destinată clinicienilor și este parte esențială a practicii de zi cu zi a specialiștilor din domeniu la nivel mondial. UpToDate este una din resursele asociate cu cele mai bune rezultate bazate pe dovezi, care servește drept suport în luarea deciziilor clinice. UpToDate este un produs informațional indispensabil pentru sute de mii de medici și practicieni din sistemul de asistență medicală, care fiind actualizată sistematic acționează ca un coleg medical de încredere ce oferă informații obiective, bazate pe dovezi, la subiecte de îngrijire medicală. Baza de date UpToDate conține articole de sinteză (reviuri sistematice) la 9.500 subiecte medicale pentru 21 de specialități medicale, noutăți medicale și calcule pe specialități, interacțiunea medicamentelor, informații pentru pacienți etc.

 HINARI

Programul HINARI (Health InternetWork Access to Research Initiative) coordonat de Organizația Mondială a Sănătății – oferă acces gratuit la cea mai largă colecție de resurse (10728 titluri de reviste medicale, 18798 cărți electronice din diferite domenii științifice), editate de cele mai prestigioase edituri: Blackwell, Elsevier Science, The Harcourt Worldwide STM Group, Wolters Kluwer International Health&Science, Springer Verlag și John Wiley etc.

Totodată, prin HINARI se oferă acces și la alte 28 baze de date (Scopus (Elsevier), Web of Knowledge Special Edition - Medline, Web of Knowledge Special Edition - Current Contents, Popline etc.) și colecții de reviste electronice, 42 surse de referință și 16 colecții în acces deschis.

În compartimentul **Reference Sources** puteți accesa cele mai relevante resurse axate pe medicina bazată pe dovezi: Cochrane Library, Clinical Evidence, EBM Guidelines, BMJ Best Practice, Essential Evidence Plus, BMJ Case Reports, BMJ Learning, Duodecim EBM Guidelines etc.

Din rețeaua universitară, accesați: <http://hinari.usmf.md> (fără autentificare prin nume utilizator și parolă).

Din exterior, accesați: <http://www.who.int/hinari> (cu autentificare prin nume utilizator și parolă).

HINARI Access to Research in Health Programme

HINARI Programme set up by WHO together with major publishers, enables low- and middle- income countries to gain access to one of the world's largest collections of biomedical and health literature. Up to 12,700 journals (in 30 different languages), up to 24,900 e-books, up to 70 other information resources are now available to health institutions in more than 100 countries, areas and territories benefiting many thousands of health workers and researchers, and in turn, contributing to improve world health.

About HINARI

HINARI Access to Research in Health Programme provides free or very low cost online access to the major journals in biomedical and related social sciences to local, not-for-profit institutions in developing countries.

HINARI was launched in January 2002, with some 1500 journals from 6 major publishers: Blackwell, Elsevier Science, the Harcourt Worldwide STM Group, Wolters Kluwer International Health & Science, Springer Verlag and John Wiley, following the principles in a Statement of Intent signed in July 2001. Since that time, the numbers of participating publishers and of journals and other full-text resources has grown continuously. 170 publisher partners and up to 400 publishers' content are offering more than 51,000 information resources in HINARI and many others are joining the programme.

Partners

Publishers' statement of Intent, London, 9 July 2001

HINARI was developed in the framework of the Health InterNetwork, introduced by the United Nations' Secretary General Kofi Annan at the UN Millennium Summit in the year 2000.

Adjuvanted A/H1N1 (2009) Influenza Vaccination During Pregnancy: Description of a Prospective Cohort and Spontaneously Reported Pregnancy-Related Adverse Reactions in the Netherlands

Loes de Vries^{*1}, Florence van Hunsel^{1,2}, Benedikte Cuppers-Maarschalkerweerd¹, Eugène van Puijenbroek^{1,2}, and Kees van Grootheest²

Background: During influenza pandemics, pregnant women have an increased risk of severe complications. Vaccination can diminish these complications. In the Netherlands, the adjuvanted vaccines Focetria[®] and Pandemrix[®] were used during the A/H1N1 (2009) influenza pandemic. The national vaccination scheme included pregnant women, but knowledge concerning the safety of adjuvants during pregnancy was lacking. The aim of the study is to assess safety of adjuvanted influenza vaccines during pregnancy. **Methods:** The Dutch Teratology Information Service, part of the Netherlands Pharmacovigilance Centre Lareb, recruited 295 A/H1N1 (2009) vaccinated pregnant women through health care providers. Questionnaires were sent during the pregnancy to their health care providers and a second one 6 weeks after the estimated date of birth. Reported complications and adverse outcomes were compared with background rates. Additionally, the spontaneously reported pregnancy-related adverse reactions in the database of the Netherlands Pharmacovigilance Centre Lareb are described. **Results:** Compared with the background rate, no increased risk of spontaneous

abortions or congenital malformations was observed. There were three spontaneous abortions among 23 first trimester exposures. In the cohort of 281 pregnancies with known outcomes, three major malformations were observed after exposure at any time during pregnancy. In these cases exposure occurred once periconceptional, and twice in the second trimester. Furthermore, no increased risk of adverse pregnancy outcomes or neonatal problems were observed. The spontaneously reported pregnancy-related adverse events showed no unexpected pattern. **Conclusion:** The present study adds further reassurance for the safe use of adjuvanted vaccines during pregnancy and facilitates decision making in future pandemics.

Birth Defects Research (Part A) 100:731–738, 2014.

Key words: pregnancy; A/H1N1 (2009) influenza; adjuvant; vaccine; safety

Introduction

Pregnant women, with or without an underlying medical condition, have an increased risk of severe cardiorespiratory

infections like pneumonia was observed in pregnant women by Jamieson et al. (2009).

Vaccination can reduce the risk of influenza-related

[About NCBI](#)

PubMed - baza de date textuală al publicațiilor medicale și biologice în limba engleză, secțiunea "biotehnologie" a Bibliotecii Naționale de Medicină din SUA.

Baza de date a fost dezvoltată de Centrul Național de Informare în Biotehnologie (NCBI) ce reprezintă progresele științei despre sanatate prin asigurarea accesului la informații biomedicale și genomica.

PubMed este o versiune gratuită a bazei de date MEDLINE.

PubMed a fost introdus pentru prima dată în ianuarie 1996

În PubMed sunt liste de reviste din diferite categorii de științe de bază și sociale, inclusiv antropologie, biochimie, biologie, chimie, educație (în general) și biblioteconomie, genetica, anatomie umană, drept, microbiologie, Neurobiologie, nutriție, psihologie, Știință (general) și științele sociale.

Abstract

Paroxysmal nocturnal haemoglobinuria (PNH) is characterized by chronic, uncontrolled complement activation resulting in elevated intravascular haemolysis and morbidities, including fatigue, dyspnoea, abdominal pain, pulmonary hypertension, thrombotic events (TEs) and chronic kidney disease (CKD). The long-term safety and efficacy of eculizumab, a humanized monoclonal antibody that inhibits terminal complement activation, was investigated in 195 patients over 66 months. Four patient deaths were reported, all unrelated to treatment, resulting in a 3-year survival estimate of 97.6%. All patients showed a reduction in lactate dehydrogenase levels, which was sustained over the course of treatment (median reduction of 86.9% at 36 months), reflecting inhibition of chronic haemolysis. TEs decreased by 81.8%, with 96.4% of patients remaining free of TEs. Patients also showed a time-dependent improvement in renal function: 93.1% of patients exhibited improvement or stabilization in CKD score at 36 months. Transfusion independence increased by 90.0% from baseline, with the number of red blood cell units transfused decreasing by 54.7%. Eculizumab was well tolerated, with no evidence of cumulative toxicity and a decreasing occurrence of adverse events over time. Eculizumab has a substantial impact on the symptoms and complications of PNH and results a significant improvement in patient survival.

Abstract

 [View references \(24\)](#)

SCID can be caused by various genetic mutations leading to distinctive phenotypes according to the presence of T, B and NK cells. Artemis is a gene encoded on chromosome 10p. The deficiency of this molecule causes an inability to repair DNA double strand breaks and is one of the causes of radiosensitive T-B-NK+ SCID. The syndrome usually presents with opportunistic infections in the first years of life that leads to death if not treated with stem cell transplantation. The spectrum of the disease can be wide because of the heterogeneity of the mutations. Herein we present an atypical SCID (CID) patient with Artemis defect mimicking hyper IgM syndrome. Our patient had high serum IgM with low IgG and IgA levels, lymphocytosis and recurrent infections, intractable diarrhea, growth retardation, systemic CMV infection and sclerosing cholangitis. He also developed large granular lymphocytic leukemia and survived until the age of 6.5 years. © 2013 Elsevier Ltd.

Anemia

Anemia is a condition in which the body does not have enough healthy red blood cells. Red blood cells provide oxygen to body tissues.

Other types of anemia include:

- [Anemia due to B12 deficiency](#)
- [Anemia due to folate deficiency](#)
- [Anemia due to iron deficiency](#)
- [Anemia of chronic disease](#)
- [Hemolytic anemia](#)
- [Idiopathic aplastic anemia](#)
- [Megaloblastic anemia](#)
- [Pernicious anemia](#)
- [Sickle cell anemia](#)
- [Thalassemia](#)

Causes

Although many parts of the body help make red blood cells, most of the work is done in the bone marrow. Bone marrow is the soft tissue in the center of bones that helps form blood cells.

Healthy red blood cells last between 90 and 120 days. Parts of your body then remove old blood cells. A

Epigenomics special issue

Guest Editor: Alexander Meissner

In this issue of *Genome Biology* we present a special collection of Research, Review, Opinion, Research Highlight and Editorial articles focusing on epigenomics. The issue provides a variety of new insights into the biology of DNA methylation, histone modifications and chromatin organization, and includes perspectives on epigenomics past, present and future from leaders in the field.
